EDUCATION

Kalaignarkarunanidhi Institute of Technology – Coimbatore, Tamil Nadu, India.
B.Tech. Electronics and Communication Engineering, Pre-Final year
Coursework: IoT protocols, Digital communication, Signal Processing, Semi-Conductors, Communication Systems.

2023 – 2027
Current **CGPA: 7.91/10.0**

EXPERIENCE

- Core Java Training, Litz Tech – Coimbatore, Tamil Nadu**
- Completed hands-on training in Core Java, focusing on OOP concepts, collections, exception handling, and file handling. Developed console-based Java applications using data structures and best coding practices.
- IoT Training, Sanz Innovation – Salem, Tamil Nadu**
- Gained practical experience in IoT fundamentals, working with sensors, microcontrollers, and real-time data handling. Built basic IoT projects involving sensor data acquisition and hardware–software integration.

PROJECTS

- 1. AI-Integrated File & Folder Management System (Python, AI Automation)**
- Designed a safety-first file management system integrating AI-based confidence scoring, risk evaluation, and a hybrid decision engine (AUTO / ASK / BLOCK) to intelligently approve, confirm, or block file operations, with strict path validation and controlled execution
 - Implemented modular decision logic separating risk analysis, AI inference, and execution layers to ensure safe and explainable automation flow.
- 2. Fitness Training Frontend Application (HTML, CSS, JavaScript)**
- Built a responsive fitness training interface using dynamic JavaScript rendering to generate workout schedules and UI components, focusing on logic-driven layout creation and interactive user experience.
 - Applied conditional rendering and data-driven UI generation to dynamically update workouts without hard-coded HTML changes.
- 3. Music Playlist Manager (Java, Data Structures)**
- Built a terminal-based music playlist manager using a Circular Doubly Linked List (CDLL) to handle play, next, previous, add, and delete operations, with data persistence using serialization.
 - Designed efficient pointer-based traversal logic to support continuous navigation and real-time playlist updates.
- 4. State Graph System (Java, Data Structures, File Handling)**
- Developed a console application to create states and connect cities within each state using OOP, HashMap, and file handling to store data permanently.
 - Modeled state–city relationships as graph structures to manage connections and enable scalable data organization.

TECHNICAL SKILLS				CERTIFICATIONS
Core Java	DSA	Git	Foundation of AI Automation	Brainery Spot – Data Structures and Algorithms
Python	OOPs	HTML	using Python API	Hacker Rank – Python Basics Test
C	SQL	CSS	Java script	Hacker Rank – Java Test
Jdbc				

COMPETITIVE PROGRAMMING

Leetcode : Max rating - **1497** | Solved problems: **121** | Top **45.07%** globally | Badges : **1** | Highest Rank : **142873** |

Codechef : Max rating - **1130** | Position : **1** Star | Problems : **215** | division **4**. **Global Rank** in Codechef : **100257** |

ACHIEVEMENTS	SOFT SKILSS
• Participated in SIH 2024 and selected for 2nd round. • Earned 50 days badge in leetcode. • Attended 35+ contest in codechef. • Presented Paper in the topic Smart Tollgate using ANPR System.	1. Problem and analytical thinking 2. Team collaboration . 3. Adaptability and quick learning. 4. Leadership
